

How to make a Lens Cozy

Materials:

14" x16" of material
3"x15" 1" foam piece

#####

Let's begin, shall we?

Take your cut piece of fabric and fold it over so it is 7" and 15", with the foam piece on the inside against the folded edge.

Next sew lines across the length of the fabric and foam with about an inch between each line. This will leave you with a strip at the bottom that has no foam in it.

Next, grab your lens and see how big around you need the cozy to be. Leave about $\frac{1}{2}$ inch for the seam and cut off the remaining foam piece. I serged the seam, but you could just straight-stitch and then zig-zag the ends together.

Next, go down about 2 inches from the end of the foam and stitch a seam across the bottom. Next you will want to create a box for the bottom, so sew up two triangles on the bottom as so:

Next turn it to the right side out. Almost done! Take your remaining piece of foam and serge it into a roundish piece for the bottom, or just zigzag it around the edges so it is enclosed. You could probably finish it nicer with some seam binding if you are so inclined. Place in the bottom of the tube.

All done and ready for the lens!
